New Neets Audio Amplifiers ready

Hi

At ISE 2009 Neets presented our three new Audio Amplifiers. These amplifiers are now ready from stock.

Neets Audio Amplifier Version 1, P/N#: 312-0001

The Neets Audio Amplifier Version 1 is the smallest amplifier in the series of Neets audio amplifiers. With this Audio amplifier Version 1 you get a RS-232 controllable 2x15 Watt amplifier in 8 Ohm. The amplifier is secured with short circuit speaker outputs. Besides this you get 3 unbalanced inputs.

The amplifier can be control via a Neets Control system. Connecting your Neets control system to the Audio Amplifier Version 1 via the RS-232 port gives you the possibility to control channel, gain, volume, bass, treble, balance, mute and on/off.

The amplifier also has a Wake On Signal function, which means that the amplifier will turn on when receiving an audio signal on one of the inputs. Presets on the source input – each source input can have a preset treble, gain, bass and so on. Finally you get a direct connection for mute, input select and volume.

Neets Audio Amplifier Version 2, P/N#: 312-0002

The Neets Audio Amplifier Version 2 is the second largest amplifier in the series of Neets audio amplifiers. With the Audio Amplifier Version 2 you get a 2x25 Watt amplifier in 8 Ohm.

You get the same benefits as in version 1. Besides this one of the huge benefits with the Audio Amplifier Version 2 is that when controlling the Audio Amplifier via a Neets Control system, for instance the Neets Control – FoXtrot, the RS-232 loopthrough function will give you the possibility to control both the amplifier and a projector. This means that you can control **two** devices via RS-232 from a control system with only one RS-232 comport. The control system, connected to the Audio amplifier, sends a RS-232 signal to the amplifier. The amplifier loops the signal through to the projector.

Neets Audio Amplifier Version 3, P/N#: 312-0003

The Neets Audio Amplifier Version 3 is the largest and most advanced amplifier in the series of Neets audio amplifiers. Besides the same benefits as version 1 and version 2 you get a number of different benefits in this version.

This advanced version also has one microphone input with volume adjustment. The microphone input is used at the same time as another sound source (talk over music).

The Audio Amplifier Version 3 has got 3 RS-232 inputs and control via LAN, both control functions has a loopthrough possibility. When using LAN to control the Neets Audio Amplifier Version 3 (via the Neets Control – EU Professional) you actually get 3 extra comports from the amplifier to control via the Neets control system. This means that besides the 2 RS-232 comports that you already have on your Neets Control – EU Professional, you get 3 extra via the Amplifier – giving you a total of 5 RS-232 comports.

All in all three audio amplifiers that supports your requests in various projects. The audio amplifiers are ready from stock and can be ordered at www.neets.dk.
