

Neets Input Panels

Neets input panels add a quality finishing touch to any Neets control installation. Designed to blend harmoniously with the Neets control system panels, Neets input panels are elegantly designed, discreet in appearance, and solidly constructed for years of reliable use. Unsightly and unreliable loose wires and terminations are avoided, with all connectors firmly mounted in the panel. Neets input panels complement both the look and the functionality of a Neets AV control system in any classroom, meeting room or boardroom installation. Two versions of each panel are available, one for DK standard outlet boxes and one for EU standard outlet boxes.
