

# Neets also controls big auditoriums

**In an auditorium with room for 900 sitting listeners the project was to control two screens and two projectors. The obvious solution was Neets.**

Danish company AV-Teknik Ry got a major project from an organization in Denmark, adding the Audio Visual Equipment in an auditorium with room for 900 sitting listeners. The organization uses the auditorium approximately 32 weekends each year.

The assignment was to control two large electronic screens, two projectors and a monitor for the lecture. Furthermore it had to be easy and intuitive to use with a sync run.

“The obvious choice was Neets” says the director of AV-Teknik Ry.

AV-technik Ry is a quite new Danish company which specializes in consultancy, montage and service of Audio Visual equipment. The company works with a broad range of the most acknowledge suppliers on the marked.

The director knows Neets from his previous projects. “I like working with Neets products. The programming of the control systems are very intuitive and straight forward and the panels are easily mounted where you need them.”

For the project he used a Neets Control – EU Professional, a 2-relay box with PSU and a 4-relay box with PSU - all products from Neets.

By the press of one button on the Neets control panel, the light in front of the screen is off, the screens roll down, the projectors start and show the selected source and the monitor starts giving the lecturer an overview on his or her presentation.

In this case AV-Teknik Ry used the Neets Control – EU Professional. As all control systems in Neets product portfolio, this system is a small but intelligent control system to access all functions of a large screen projector while controlling the functions of the room.

The project has had the first run with all 900 listeners with complete satisfaction.
