

# Danes keep it all compact

There is probably not a conference room or family lounge where space is not at a premium – which is why the emphasis in many new audiovisual products is on reducing their size. Responding to that requirement is Danish company **Neets**, which is using ISE 07 to announce its newest product, the Neets Control Foxtrot.

Designed to be not only compact but also affordable, the Neets Control Foxtrot is able to access not only all the key functions of a large screen projector, but also its environment, such as lighting, drapes and the screen. Neets points out that a unique feature of the device is that it

**Nice and Neet:**  
the Control Foxtrot can communicate with projectors, screens, lights and drapes

does not include an on/off switch – simply touching one of the eight keys on the panel causes power to be applied.

According to the company, the system is easily programmable in the Windows environment and, should customer needs change in the future, it is just as easily reprogrammable. **Stand**
