

Hello

Summer is coming and here is a couple of news from Neets.

Central Control Update

The Neets Central Control is now available for free download. When using the free download you will be invited to register via our homepage. The registration will only be applied for internal use, and will not be giving to third party.

When you register you will get access to updates of the software. This will also give you access to use the Central Control for all Neets Control – EU, you will no longer need a license for each control system.

Neets Central Control has undergone some changes in a new software update. The software is supporting the newest firmware in Neets Control – EU. Choosing the Central Control function will give you a warning before the function runs, giving you the possibility to omit this function. The warning is optional.

When designing your system you will now have the opportunity to change the names on each button on the control system. This way you can design the system so it will fit your specific project.

Neets Control – FoXtrot

Neets Control – FoXtrot is now available with 2 I/O instead of 1 input and 1 output. This makes the control system even more intuitive and your design possibility in the programming of the software is broadened fitting your specific project. Furthermore you will get a better control when using the I/O's for screen control. You will get mutual blocking, and the relays will undergo minor liability.

We have still got 10 pcs. of the old version Neets Control – FoXtrot anthracite (with 1 input and 1 output). We will make a special offer – “first mover” with a **20% discount** on these 10 pcs. Please call for order +45 75 666 099

Have you considered the Neets Control - QueBec?

Neets Control - QueBec is Neets newest control system, special made to make presentation as intuitive and straight forward as possible. The Neets Control - QueBec is connected to the PC or Laptop thru VGA, and on to the projector. Starting up the PC sends the VGA signal to the Neets Control - QueBec and loops thru starting up the projector - no buttons, no problem operating the projector, just start the PC and the presentation can begin.

Closed for summer

Neets will be closed for the summer from July 14th to July 25th both days included.

We wish all our customers a nice summer.

Best regards
