Hi

Greatings from everybody at Neets

Here is an update on our latest news.

Neets Serial splitter launches in December
Neets will launch our latest product this December. The Neets Serial splitter 1-4.
The serial splitter gives you the possibility to easy and electronically correct distribute one RS-232 signal to four identical receivers e.g. projector, LCD or Plasma screens.
Imagine a presentation room with four identical plasma screens or four identical projectors – these devices can now be controlled from a Neets Control system via the Neets Serial splitter 1-4. If you need to control more than one relay box this is can also be done via the Serial Splitter 1-4
If you need to control *more* than four devices this is also a possibility. Just add another Neets Serial splitter 1-4 to one of the output ports on the first Neets Serial splitter - the sky is the limit.
The new serial splitter will be ready for delivery in December 2007.

Neets ready for Vista with new software version
Neets Control configuration utility system for Neets Control – EU and Neets Control – FoXtrot is upgraded to version 1.3.5. The new version supports Microsoft Windows Vista. This way it will not be a problem for you to upgrade your computer.

When designing you devices - for instance a projector - it is now possible to control both focus and zoom comtemporary with volume. It is in other words possible to have more than one volume sequence in your "device driver". This feature makes the control system more fit for auditoriums and other rooms where you need more than one volume sequence.
To make the programming even more intuitive and easy for you the new version 1.3.5 has been added a shortcut to project upload in the tollbar. This way you do not need to go all the way to the end to upload the project but only press the shortcut button.

Total control with Neets Control – EU Professional
Now Neets gives you total control. No need to turn on the computer before getting started just press the source key on the Neets control – EU Professional panel and the system will start your PC for you. This means only one press of a button and you are all set.
Furthermore the system also allows you to simply press the off button on the Neets Control – EU Professional panel and the system will take care of everything – including turning off the computer. This function requires the software for Neets Auto shutdown.

New relay boxes
Have you seen the new relay boxes - 2 or 4 relays? Both boxes have test buttons which makes it possible to test the installation before mounting, light diodes indicate if the relays are pulled, all connections have plugs for an easy installation and the 4 relay box can be controlled via RS-232. Interested? - more info here.
