

News February 2007

Hello

We are back from The ISE 2007 in Amsterdam, and ready with news from Neets.

- ISE 2007 a success
- Neets Control – FoXtrot is launched
- New IP 44 accessories

ISE 2007 a success

This years Integrated Systems Europe was a success, with 363 exhibitors from 28 countries and over 16.000 visitors.

The show was also a success for Neets. We had many interested visitors, and we would like to use this opportunity to thank everybody who took their time to come and see our products.

We hope that we have created an interest in our products and look forward to future business.

Neets Control – FoXtrot is launched

The fall of 2006 and January 2007 has been busy because we wanted to launch the newest control system in the Neets product portfolio – Neets Control – FoXtrot at the ISE 2007. It cannot be argued, that this was a very good idea. The Neets Control – FoXtrot got a flying start, and we hope for great success with this product.

The Neets Control - FoXtrot is the smallest version of projector control systems in Neets product portfolio. It is unique in its design. One of the special features is that the Neets Control - FoXtrot has NO power ON button. The system starts automatically when pressing any of the source keys on the panel. The system is easy to use, which includes configuration software and installing. The system is easily reprogrammed without dismounting the panel. You just insert your programming connector in the front of the panel.

Like the Neets Control – EU, The Neets Control – FoXtrot complies directly into European standard outlets. The system combines design and functionality in one product that controls both RS-232 and IR.

LED indicates clearly which, input source has been chosen, and the LED will blink when the projector is starting up and cooling down, or when A/V Mute is in use, leaving no

doubt as to which function is activated. As you can see the Neets Control - FoXtrot is easy to use and very manageable – just like the other products in Neets product portfolio.

The Neets Control FoXtrot comes in two keyboard colors — polar white and anthracite, with easily designed keyboard labels. Design possibilities are many with our Merten frames.

New IP 44 accessories

IP 44 accessories – frames and transparent covers are now available in the web shop at www.neets.dk. The new accessories make it possible to enclosure Neets control panels. The design fits Neets Control – EU and Foxtrot. Frames and covers come in Merten and Gira design and are available in polar white and anthracite.

You can read much more about Neets Control – FoXtrot and look at our new IP 44 accessories at www.neets.dk

Best Regards

Neets
