

How do I connect the cable to the USB input panel?

Regarding products:

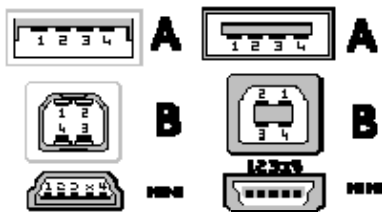

305-0065, 305-0167: Input panels

How to connect cable

Because the colours on the wires used in USB are not always the same, the safest way of connecting the cables is to measure with a Ω -meter.

Depending on the type of plug you have, the connection is as follows:

| Pin | Name | Cable color | Description |
|-----|------|-------------|-------------|
| 1 | VCC | Red | +5 VDC |
| 2 | D- | White | Data - |
| 3 | D+ | Green | Data + |
| 4 | GND | Black | Ground |

Best Regards
